## TOTAL INTERMEMBERING

Never before in the Office equipment industry has the partition modular concept offered such total flexibility. Office Divider Thinwalls can be readily intermembered with ceiling high Thinwalls — Designer Series to the Steel Thinwalls — Glass Curtain walls to flush walls — Regardless of the requirement in layout— Thinwall is flexible enough to handle the job.

# Thinwall

Series FS-3 39" high

This series is used extensively in waiting areas, reception areas and as departmental boundary dividers.

Series FS-5 52" high

Installed in areas similar to the above except the 52" height affords a greater privacy height. Ideal for areas where four drawer files are used.

## REMEMBERING

Series FS-6 68" high

A striking divider for all areas, where appearance as well as privacy is a requisite.

## ATTRACTIVE APPEARANCE

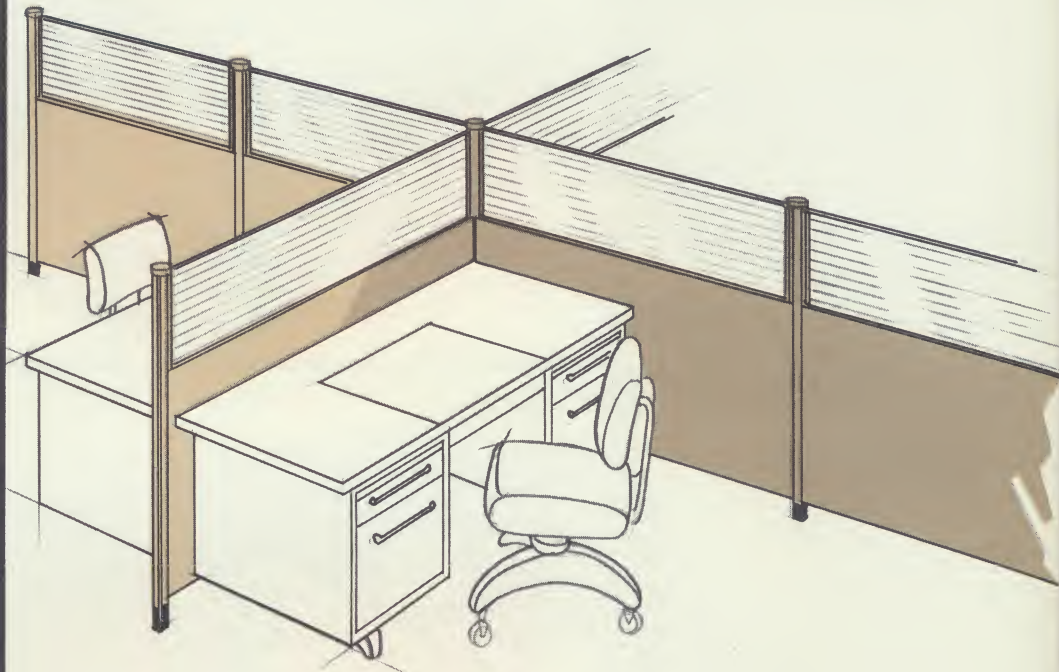

Handsomely styled in contemporary concept - crisp and clean in every detail.

### Series FS-3-G 54" high

Ideal for space division in secretarial and accounting areas.

Lower panel is 39" high with 14" of glass or other insert above.

## ERECTION and RE-ARRANGEMENT by Your Own Maintenance Men

(or by your Nationwide Distributors)  
Adanlock's exclusive "Power Pac" spring loaded stud is the reason all Thinwalls are easily erected. These simply screw into the tubular posts and the panel is snapped into place. Simple 1-2-3 erection actions will save you many hours and money when you have to relocate Thinwall Office Dividers to compensate for layout changes.

Illustrated (at right) are the basic erection steps.

### 1—Connect panels and post to erected unit.

Levelling devices are incorporated in each post to compensate for unevenness in floors. Level each unit as it is installed.

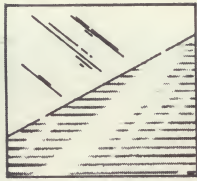

### 2—Installation of insert.

Adanlock features — "Side insertion". No need to raise insert above the height of the post. Simply place one side of insert into channel and pivot insert into place.
